EcoModule RM-1 — heat from waste

A containerised unit — a high-temperature vortex reactor. Designed to produce heat for space heating and processes from suitable carbon-containing waste.

STATUS Pilot-industrial prototype built; runs at our own research site.

Safety confirmed

Test report No. ФТ0921ПИ-3/117 of 30.09.2021: compliant with TR CU 010/2011 "On the safety of machinery and equipment".

Technical specification

ТУ 28.99.39-001-0107994046-2021; catalogue sheet of FSBI RST No. 200/135957 of 23.09.2021.

Feedstock first

Moisture, ash, calorific value, chlorine, sulphur, metals, hazard class — tested before any proposal.

Metering

Heat and electricity meters; emission and ash reports — part of the trial programme.

How it works

Preparation
sorting and shredding

Decomposition
controlled high-temperature decomposition

Heat
transfer to the consumer system

Metering
instruments and reports

Engagement models

Pilot

trial on your site; programme and criteria agreed up front

Supply

based on trial results

Energy service contract

payment linked to achieved savings under the contract; applicability after a survey

We invite companies with their own carbon-containing waste and a heat demand to trial RM-1 on their own site — with metered heat.

Describe your waste and where heat is needed

Waste composition and volumes, heat consumer, site — send them and we will propose a trial programme.

Reactor design, operating modes and control algorithms are not disclosed. Heat output, emissions and economics are published only after trials at a customer site.
